

ENGG 1330 Group Project

Shared Brainstorming Area

Modules

Input System

Target

Gun (or
Cannon)

Destructible Object

Indestructible Object

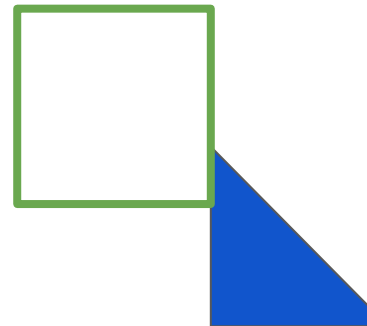

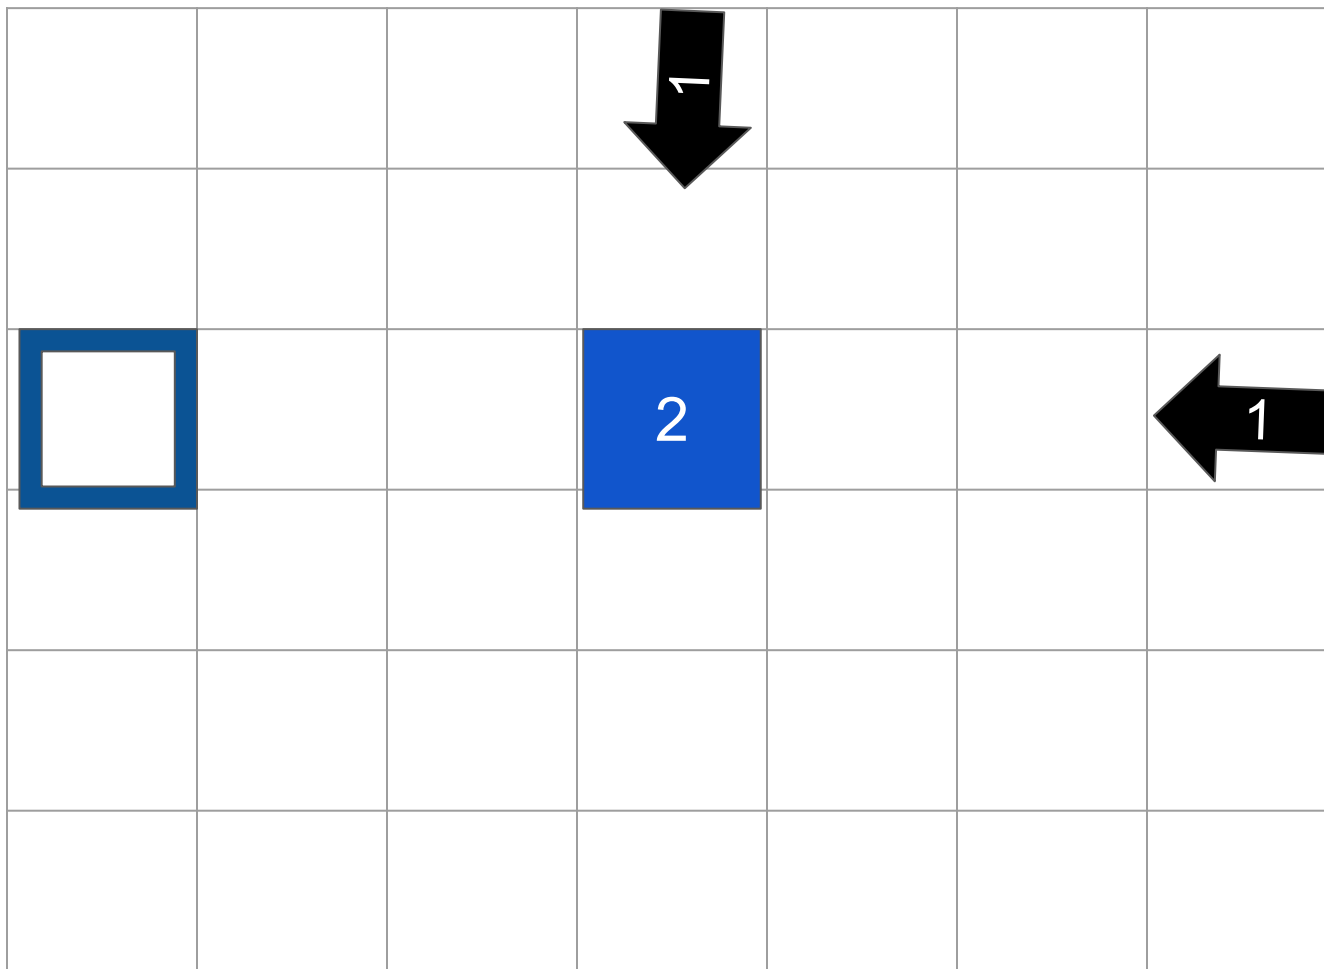

Reflective Sheet of Metal
-> destructs after one hit

Things we need to do.

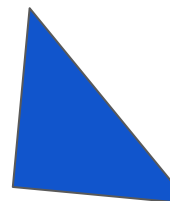

Develop main game loop

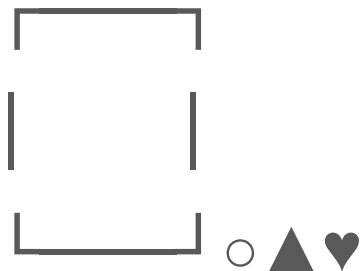

Make a short trailer (<1min)

Make a explanatory video (<5min)

Selected = (x,y)

Modules (except video)

Grid Mechanics

Movement, Mechanics

Bullet Mechanics

TUI Design(interface) -> some who dislikes coding

Level Design -> someone who absolutely hates coding

Put them all together

1. Ether design grid and elements into 80x24
2. Yash develop levels and discuss with Ether
3. Ethan and Chen somehow make it work
4. Discussion
5. To be decided
